

HANUMANT JAIN

SOFTWARE DEVELOPER | FULL STACK ENGINEER

Pune, Maharashtra, India | +91-9172806208 | hanumantj17@gmail.com
Portfolio: hanumantj.netlify.app | LinkedIn: linkedin.com/in/hanumant-jain/

PROFESSIONAL SUMMARY

Software Developer with **2+ years of professional experience** designing, developing, and optimizing scalable web applications and cloud-native services. Strong expertise in **React.js, Node.js, TypeScript, Python, FastAPI, REST APIs, PostgreSQL, and AWS**. Experienced in developing backend services, integrating third-party APIs, building reusable frontend components, implementing CI/CD pipelines, and troubleshooting production applications. Demonstrated impact in handling **5K+ daily requests, reducing API response time by 30%, improving application performance by 40%, and reducing deployment time by 40%**. Strong foundation in full-stack development, microservices, cloud architecture, DevOps practices, and Agile delivery.

TECHNICAL SKILLS

Languages:	JavaScript, TypeScript, Python, SQL
Frontend:	React.js, Next.js, Tailwind CSS, HTML5, Responsive Web Development
Backend:	Node.js, FastAPI, REST APIs, Microservices, API Development, Third-Party API Integration
AWS & Cloud:	AWS Lambda, Amazon ECS, Amazon S3, Amazon RDS, API Gateway, CloudFront, CloudWatch
DevOps & Tools:	Docker, Jenkins, GitHub Actions, Git, GitHub, Linux, CI/CD
Databases:	PostgreSQL, MySQL
Architecture & Engineering:	Cloud-Native Applications, Scalable Systems, Performance Optimization, Monitoring & Logging, Production Support, Debugging
Development Methodologies:	Agile, Scrum, Code Review, SDLC

PROFESSIONAL EXPERIENCE

IBM | Software Developer

June 2025 – Present

Pune, Maharashtra

- Developed and maintained **scalable backend services using Node.js, TypeScript, and AWS Lambda**, supporting **5K+ daily requests** with reliable cloud integrations.
- Designed and implemented **RESTful APIs** for frontend-backend communication, business workflows, and service integrations.
- Built reusable **React.js components** and optimized rendering and application workflows, improving frontend load performance by approximately **25%**.
- Performed API profiling and application-level optimization to identify bottlenecks, reducing average response time by approximately **30%**.
- Integrated **AWS Lambda, ECS, S3, RDS, API Gateway, and CloudWatch** to support scalable application infrastructure and monitoring.
- Designed and maintained automated **Jenkins CI/CD pipelines**, reducing deployment time by approximately **40%** and supporting bi-weekly production releases.
- Implemented application monitoring, logging, and troubleshooting practices to improve system reliability and production issue resolution.
- Collaborated with developers, QA, and cross-functional stakeholders throughout the **SDLC**, including development, testing, deployment, and production support.

George Washington University | Student Project Assistant III

March 2025 – May 2025

Washington, DC

- Developed full-stack web applications using **React.js, JavaScript/TypeScript, and backend REST APIs** for enterprise-oriented use cases.
- Designed modular application components with emphasis on **maintainability, scalability, and clean architecture**.
- Optimized frontend and backend interactions, improving application performance by approximately **20%** and supporting **500+ concurrent users**.
- Automated application deployment workflows using **GitHub Actions**, improving release consistency and reducing manual deployment effort.

- Implemented application **logging and monitoring** to support proactive identification and troubleshooting of runtime issues.
- Worked in an iterative development environment to analyze requirements, implement features, test functionality, and resolve defects.

Accenture | Software Developer

August 2022 – August 2023

Pune, Maharashtra

- Developed backend modules for enterprise applications and integrated **10+ third-party APIs** to enable secure and reliable data exchange.
- Designed API integration workflows supporting communication between internal services and external systems.
- Automated repetitive business workflows, reducing manual operational effort by **30%+** and improving process efficiency.
- Investigated and resolved **50+ production issues** through debugging, log analysis, root-cause investigation, and code optimization.
- Improved application stability by identifying performance and functional issues and implementing corrective solutions.
- Participated in **Agile/Scrum ceremonies**, sprint planning, daily stand-ups, code reviews, and release activities.
- Collaborated with cross-functional teams to translate business requirements into technical solutions and deliver features within sprint timelines.

TECHNICAL PROJECTS

GalleryAI | Full-Stack Social Media Platform

React.js | TypeScript | FastAPI | PostgreSQL | AWS Lambda | API Gateway | CloudFront | CloudWatch

- Architected and developed a scalable full-stack social media platform using **React.js, TypeScript, FastAPI, and PostgreSQL**, supporting **1,000+ users and 10,000+ media uploads**.
- Developed RESTful backend services using **FastAPI, AWS Lambda, and API Gateway** for scalable application functionality.
- Designed backend workflows for media upload, storage, retrieval, and user interactions.
- Improved overall application performance by approximately **40%** through application optimization and **CloudFront-based content distribution**.
- Implemented **CloudWatch monitoring and centralized application logging** for performance tracking and issue identification.
- Designed the application architecture to support increasing user traffic and media-processing requirements.

AgentBounty | AI & Blockchain Technologies

Node.js | OpenAI | Hedera x402 | ENSv2 | The Graph | Blockchain

- Built an **autonomous AI agent (Node.js)** that independently discovers on-chain bounties and evaluates task feasibility.
- Designed spending-limit reasoning resolved via **ENSv2**, enabling the agent to autonomously decide which bounty tasks it can afford to pursue.
- Implemented payment for live blockchain data via the **Hedera x402 protocol** prior to autonomously submitting its answer on-chain.
- Integrated **OpenAI** as the core judgment engine of the system, grounding anomaly-detection verdicts (**SUSPICIOUS/CLEAR**) in live **Graph subgraph** data.
- Architected a dual-verification system requiring the same LLM call to be run independently by the agent and a separate verifier, with both the verdict and flagged transaction required to match before any reward is released.

EDUCATION

The George Washington University

Master of Science in Computer Science

Washington, DC

August 2023 – May 2025

Savitribai Phule Pune University

Bachelor of Engineering in Computer Engineering

Pune, Maharashtra, India

August 2018 – August 2022

ACHIEVEMENTS

- **Winner – Katana Forge Dev Track**, ETHGlobal ETHNewYork 2025
- **Winner – Entrepreneur Category**, Hack PSU 2025
